Ayerbe Caldearenas line

Caldearenas (Huesca, Spain)

Project description

€180 million renovation project on the Zaragoza–Huesca–Canfranc line, Northern Spain. Most work was focused on the Ayerbe–Caldearenas and Jaca–Canfranc sections. Track renewal included the installation of approximately 130,000 metres of new rail.

Challenge

Renovation of a historic brick rail tunnel.
Contractor: Rover Rail.
Client: Adif.
Designer: Ineco.
Applicator: Gunitas del Pirineo.
The task was to eliminate PVC and insitu cast concrete in the design and replace with sprayed concrete composite.

Solution

"MasterRoc MSL 345 providing highly durable waterproofing solutions"

Master Builders Solutions use of MasterRoc MSL 345 for faster application and production helped the customer achieve their goals. Reduced labour time, waste and curing speeds were observed. Plus, the ability to apply in complex geometries assisted with full coverage and lead to a long service life. 125 Tonnes of MasterRoc MSL 345 used.

High application rates
